Sisecam, Sonelgaz and many more

Financial Performance

Strategy

More and more customers have the desire to bring the production of system-relevant products closer to their own location. Especially in times of pandemic and crisis, ensuring reliable supply chains is extremely important. Therefore, it is important to establish the field of mold making within Europe. A lack of skilled workers must be considered as well.

Vision

During the pandemic, the dependence of European producers on Chinese suppliers has become apparent. Especially systemically important products should be manufactured in Europe.

In addition, there is a glaring shortage of skilled workers in the field of mold making.

That is why we are looking for a partner in Turkey to establish a tool shop for injection moulding tools in order to enable and increase lost sales.

What will we do?

We will invest approximately 1 Mio EUR in tools and CNC-machinery. As well as the experience of over 50 years and applied knowledge.

We will supply skilled designers and quality managers.

We offer company participation

Higher income with incentives and healthcare

What do we need?

- Active or passive partner who are willing to invest into state-of-the-art CNC-machines and supports recruiting skilled local workers and engineers.

- Close cooperation with colleges and universities in order to qualify young students as toolmakers on shop floor level on mutual basis.
