..... «« HELLO »»

..... «« MERHABA »»

Since we officially left winter behind, we can begin to talk about spring and therefore about the firsts. Like we did before, let's shuffle through the pages of the dictionary once again and use a reference; we are choosing the word 'first' as the one we want to explain. This word, meaning 'a thing which comes before all others', describes exactly the novelty within our company; our participation to the Beauty & Clean Fair in Iran between April 24 and 27.

We are participating to more than one fair in 2016 as the Turkish Cosmetics Promotion Group. We will participate to the Cosmoprof Fair held in Bologna, Italy from 18-21 March, which is also organized in Las Vegas and Hong Kong, then to Beautyurasia Fair from 21-23 April, which brings more than 550 companies together under one roof every year. As Turkish Cosmetics Promotion Group, we hope to introduce our latest novelties at these fairs and we aim to be the leader in many firsts.

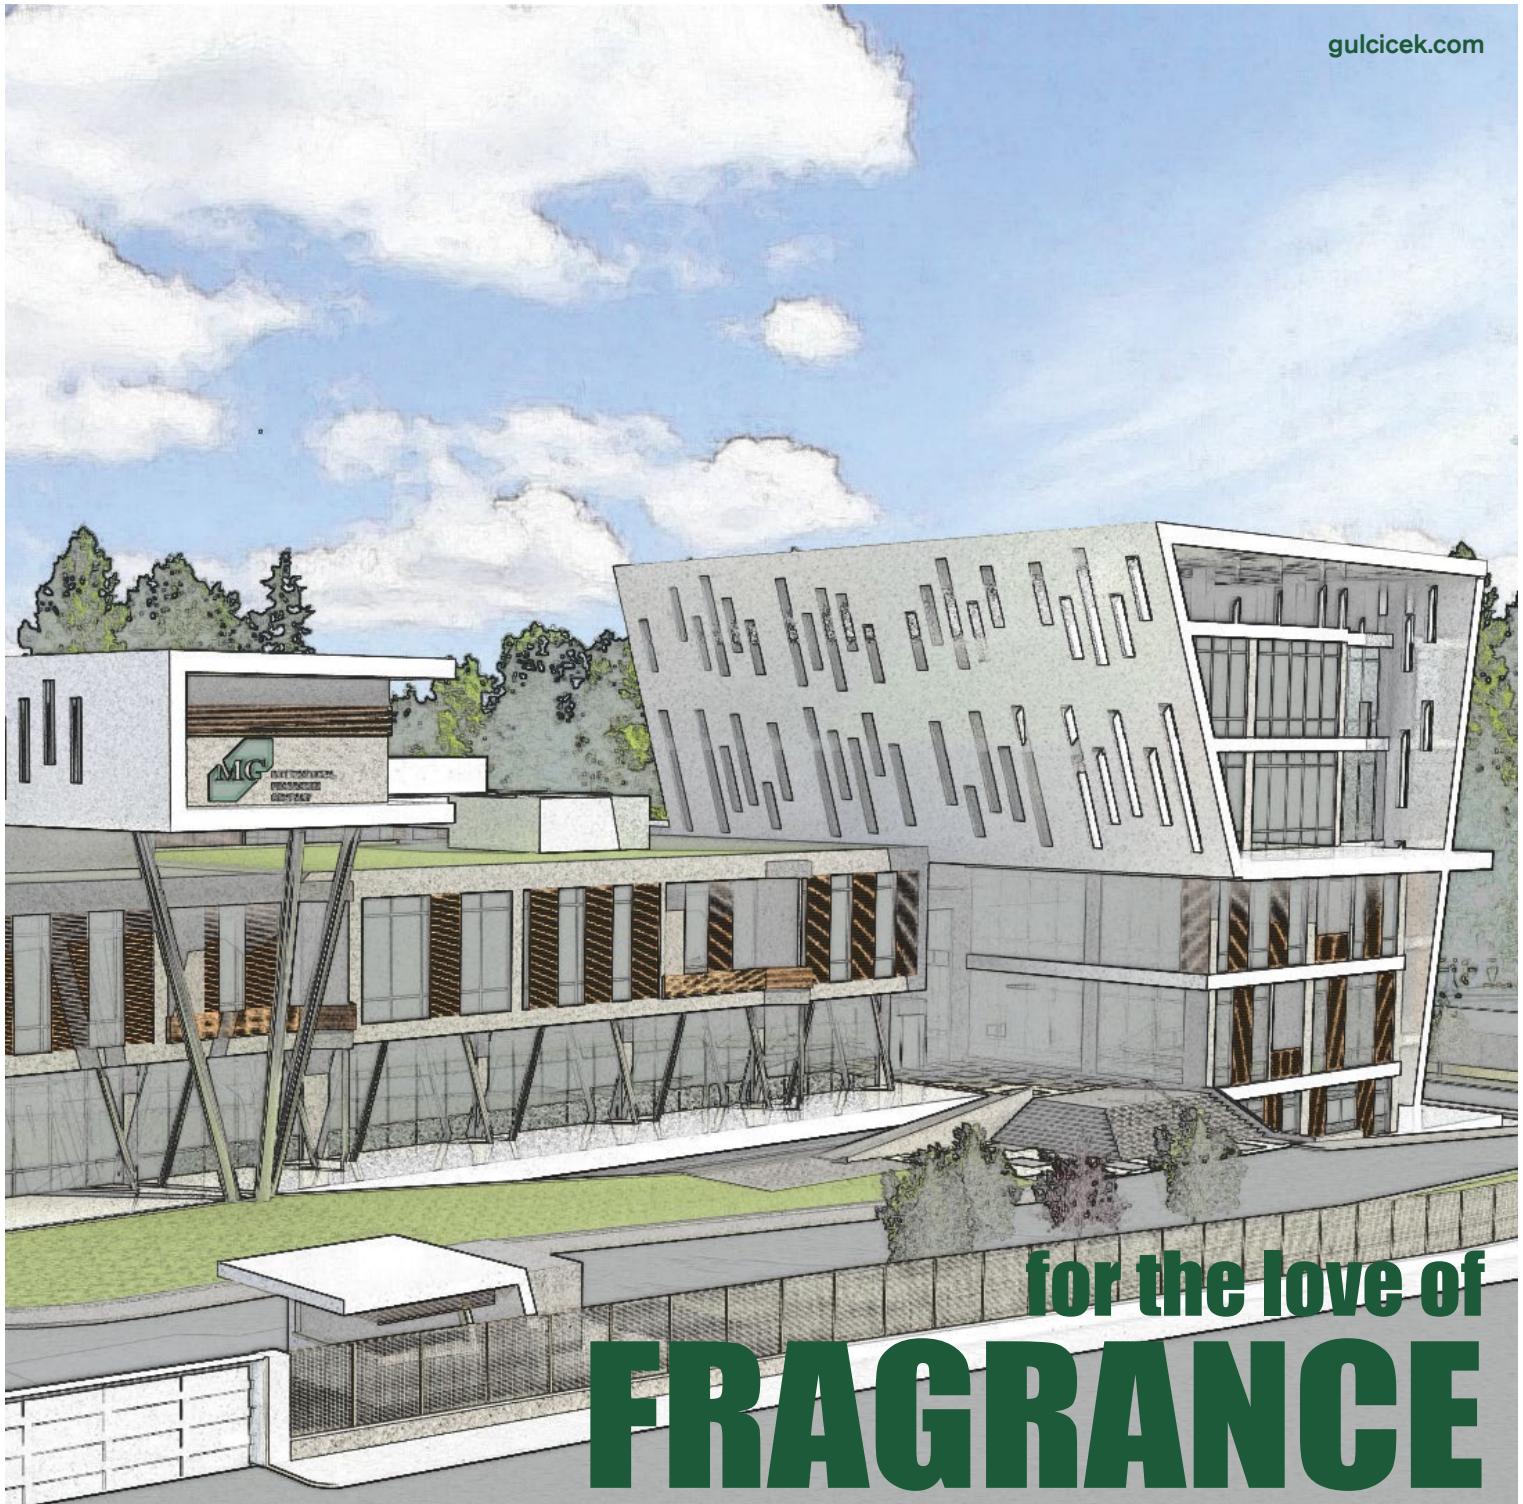

Let's talk about the first subject you will discover when you flip through the pages of our magazine; you will meet Isparta, a city known as Turkey's rose garden and the leader in the rose oil production around the world. Later, you will be introduced to anti-aging products that we can characterize as the magical formula for women of all ages. To see what other subjects we focused on this month, simply start flipping through the pages.

Resmi olarak kış mevsimini geride bıraktığımıza göre, artık ilkbahardan ve dolaylı yoldan da olsa ilklerden bahsedebiliriz. Daha önce yaptığımız gibi, bir kez daha sözlüğün sayfalarını karıştırıp sözlükten referans verelim. Bu sefer açıklamak istediğimiz kelime olarak ise 'ilk'i seçelim. Herhangi bir şeyin en önde olanı, önce geleni, en başta olanı anlamına gelen bu kelimenin tam da içini dolduracak bir yenilik ile karşınızdayız; 24 - 27 Nisan tarihleri arasında ilk defa İran'daki Beauty & Clean Fuarı'ndayız.

2016'da Kozmetik Tanıtım Grubu olarak katılacağımız fuarlar sadece bir tane ile sınırlı değil. 18 - 21 Mart tarihlerinde Las Vegas ve Hong Kong'da da düzenlenen Cosmoprof Fuarı için Bologna İtalya'da, 21 - 23 Nisan tarihleri arasında ise her yıl 550'yi aşkın firmayı bir araya getiren Beautyurasia Fuarı'nda olacağız.

Dergimizin sayfalarını çevirmeye başladığınızda karşılaşacağınız ilk konudan bahsedelim. Türkiye'nin gül bahçesi olarak tanımlanan ve dünya çapındaki gül yağı üretiminin başını çeken bir şehrə, yani Isparta'ya rastlayacaksınız. Sonrasında ise her yaştaki kadının sıhırli formülü olarak da nitelendirebileceğimiz anti-aging ürünlerini göreceksiniz. Sizin için mercek altına aldığımız diğer konuları görmek için ise derginin sayfalarını çevirmeye başlayınız.

DUYGU GÜZELCI THE 59 ELEMENTS MIRACLE

TAKING ITS INSPIRATION FROM THE 59 ELEMENTS THAT BOTH EXIST IN THE HUMAN BODY AS WELL AS THE EARTH, BIOTA COMBINES PLANT EXTRACTS AND THE LATEST TECHNOLOGICAL RESOURCES. BIOXCIN BRAND MANAGER DUYGU GÜZELÇİ, TELLS US ABOUT THE BRAND'S TODAY AND TOMORROW.

questions merve ekinil **photography** gökhan polat

Can you go back in time and tell us B'iota's story?

B'iota only has a 10 year long history. Our journey, which started in 2002 with just a dream we had, continues today with many success stories we were able to achieve locally and globally. When we started this journey, we took our strength from nature and tried to understand the magic of the 59 elements. With science, B'iota believed in the power that would rise from the collaboration between people and nature. We trusted Turkish science men and dermatologists as well as the rich flora of Anatolia. Our team is comprised of people who love their job who respect people and nature. Through their hard work, we offered health and beauty derived from plants to people. The products we developed over the years through our R&D department are distributed to all the pharmacies, drug stores and supermarkets. Bioxcin, Bioder, Bioblas, Biomen, Restorex and Nutraxin are to name a few. Health and beauty are words that we always wanted to use in the same sentence.

"59 Elements" has an important place in your brand's identity. Shall we focus on this miracle?

John Emsley's book Nature's Building Blocks

(Oxford University Press, 2003) lists and proves the 59 elements found in the human body. These same elements are also found in earth. We can say that, this important scientific fact was our starting point.

Which raw materials and plant extracts are often found in your brands?

B'iota Laboratories has more than 250 plants in its stocks and collections. From these, at least 30 of them are used in plant extracts, baby, skin care and hair products. We also use plant-based oils instead of synthetic petrol derived oils in our products.

You take nature's power, develop it in the laboratory and offer the results to your clients. What do you pay attention to when designing a product?

We try to avoid synthetic materials as much as possible and produce preservative-free products. We add scent to our products with allergen-free essences and make sure that none of them have paraben or ftalat.

How are your brands perceived overseas? Where are you most successful?

Our B'iota products are perceived highly in all of the markets, we receive positive feedback from customers; they are satisfied with the products and their high quality. We're most

successful in North America, Europe, Middle East and Turkish Republics.

There are a lot of statements about hair care. Which ones do you find right and which ones do you find wrong?

Hair care is different for women and for men. Shorthaired men can use a shampoo that washes off easily and one that doesn't leave a greasy feeling. Women with long hair should use a powerful conditioner to benefit from the added moisture, shine, volume and to brush their hair easily. Choosing the right conditioner is another important issue. A person with oily hair cannot use a conditioner designed for dry hair because their hair will get heavy and greasy much faster. Of course the amount you use is as important as what product you use. Another important thing is not to wash your hair everyday. The production of sebum is balanced in 48 hours, in order to prevent damage in hair, you need to wash it every 3-4 days with a lightly acidic (around pH 5) shampoo. We also recommend applying a natural mask with pure olive oil or avocado oil once a week.

The loss of hair due to hormonal changes, stress and aging is a problem for many people. What really differentiates

◀ 59 ELEMENT MUCİSESİ ▶

► Bizim için geçmişe dönebilir misiniz, B'iota'nın nasıl bir kuruluş hikayesi var?

B'iota, aslında sadece 10 yıllık bir öküy. Yıllar önce kurduğumuz bir hayalle 2002'de başlayan yolculüğümüz, bugün hem ülke hem de dünya çapında başarıyla imza atarak devam ediyor. Bu yola çarken gücümüzü doğadan aldık, 59 element mucizesini anlamaya çalıştık. B'iota bilimi yanına aldı, insan ve tabiatın işbirliğinden doğacak güçle inandi. Anadolunun zengin bitki örtüsünün yanısıra Türk bilim adamları ve dermatologlarına güvenildi. Mesleğini seven, insana ve doğaya saygı duyan ekibimiz gayretli çalışmalarıyla

bitkilerden gelen sağlık ve güzellik insanların hizmetine sunduk. Yıllardır sürdürdüğümüz AR-GE yatırımlarımız sonucu geliştirilen ürünlerimiz, markalarla göre bugün Türkiye'nin bütün eczanelerinde veya parfumerilerinde, marketlerinde yer alıyor. Bioxcin, Bioder, Bioblas, Biomen, Restorex ve Nutraxin bunlardan bazları. Sağlık

Blocks (Oxford University Press, 2003) kitabında, sentetik petrol türevleri yerine özellikle bitkisel doğal yağılar kullanıyoruz. İnsan vücudunda bulunan elementler listelenmiş ve 59 elementin insan vücutunda varlığı belirlenmiş. İnsan vücudu, aynı zamanda toprakta da yer alan 59 elementten oluşuyor. Bu bilimsel gerçek, çıkış noktamız oldu diyebiliriz.

Markalarınızda özellikle hangi hammaddeler ve bitkisel içerikler öne çıkmıyor?

Mükemmel olduğu kadar sentetik hammaddelerden kaçınıyoruz, koruyucusuz ürünler üretiyoruz. Alerjen içermeyen esanslarla ürünlerimizi kokulandırıyoruz. Hiçbir ürünümüzün paraben ve ftalat içermemesine dikkat ediyoruz.

Markalarınız yurt dışında nasıl karşılanıyor. En

"IN THE NEAR FUTURE WE ARE GOING TO SEE MORE COSMETICS WITH SYNTHETIC PEPTIDES AND ENZYMES. I BELIEVE THE TESTING OF THE COSMETICS IN A CELLULAR LEVEL AND KNOWING THEIR EFFECTS ON GENES WILL SUPPORT THEIR CLAIMS."

Bioxcin from other products that prevent this?

Hair loss can be caused by many reasons, and some of these are unsuspected. We usually lose our hair due to chronic or acute reasons. What separates Bioxcin from other brands that prevent hair loss is this: After 6 months of clinical research, we proved that our brand is effective on two types of the most common hair loss cases (androgenetic alopecia, telogen effluvium). If the serum and shampoo are used together, hair loss is stopped and the hair that was in the resting phase starts growing again. We cannot talk about a clinical element in other brands.

As a company, what are B'iota's values and principles?

There are a few words and concepts, which are important to us. We own up to them and make

an effort to maintain their presence. Innovative, trustworthy, global, expert, leader, solution focused are some of these words. We are a company that works with medical and plant based systems. Our principals include words like honesty, expertise, experience, strong personality, a fighter character and talent.

What is a typical day at the office like?
Our Marketing and Sales Department and R&D Department are under one roof; therefore we can optimize and apply all of our actions at once. Through a high level coordination, brands, environmental departments and all the staff can work side by side in this ecosystem, have meetings all day and work closely.

Our modern offices have leisure and sports complexes where you can find the world's most unique and rare plants. These areas are

important for the motivation of the staff as

well as offering them a place to relax.

What kind of innovations can we see in the beauty and care industry in the near future? What is the next step?

One of the biggest novelties will be using the chemistry of protein and peptide products in cosmetics. These active materials made of endogenous (which exist in the human body) peptides create a huge difference in skin care and dermocosmetics. They reduce wrinkles, remove spots and prevent skin damage. Therefore, in the near future we are going to see more cosmetics with synthetic peptides and enzymes. I believe the testing of the cosmetics in a cellular level and knowing their effects on genes will support their claims.

Can you tell us about your R&D projects?

B'iota R&D Department is one of the 245

İddialı olduğunuz coğrafyalardır hangileri?

B'iota markalarını taşıyan ürünler, gittiğimiz tüm pazarlarda tüketicilerin beğenisi, yüksek kalite algısı ve ürün memnuniyeti ile karşılanıyor. En iddialı olduğumuz coğrafyalardır arasında Kuzey Amerika, Avrupa, Ortadoğu ve Türk Cumhuriyetleri'yi sayabiliyor.

Saç bakımıyla ilgili söylemler içinde yanlış ve doğru bulduklarınız hangileri?

Saç bakımı kadın ve erkek için farklı şeyler ifade eder. Kısa saçlı erkekler kolay durulan, yağlı etki bırakmayan bir şampuanla yetinebilir, uzun saçlı sahip kadınlar ise mutlaka etkili bir saç kremi kullanmalı

cünkü saç yapılan nem takviyesi, tarama kolaylığı,

parlaklık ve hacim sağlar. Saç kremi seçimi ise bir başka önemli konu. Yağlı saçlara sahip bir kişi, kuru saç için tasarlanan bir saç kremini kullanamaz, saçları

ağırlaşır ve daha çubuk yağıları. Ürün seçimi kadar

kullanılan miktar da dikkat çekmek gereklidir. Bir de

saçların her gün yakanması çok önemlidir. Sebum

oluşumu 48 saatte dengeleniyor, saç derisindeki

tahnişi önemlek adına atılacak en doğru adım, saçları

hafta 5 civarı bir şampuanla üç dört günde

bir yıkamak olabilir. Saçlara sızma zeytinyağı ya da

avokado gibi doğal yağlarla haftada bir kez maske ve

masajı yapılmasını da tavsiye ediyoruz.

Hormonal değişiklikler, stres ve yaş gibi etkenler yüzünden saç dökülmesi birçok kişinin hayatında yer eden bir sorun. Bioxcin'i bu konuda güçlü ve etkili kılan nedir?

Saç dökülmesinin çok farklı nedenleri olabiliyor ve bazen bu nedenler tahmin edilemen dışına çıkar. Genelde kronik ya da akut nedenlerle saç kaybediyoruz.

Bizim için çok önemli bazı kelimeler ve kavramlar

var. Onlara her şekilde sahip çıkmaya, varlıklarını

sürdürümeye çalışıyoruz. Yenilikçi ve araştırmacı,

güvenilir, global, uzman, lider, çözüm odaklı, medikal ve

bitkisel yöntemlerle başvuran bir şirketiz. Prensiplerimiz

alopecia, telogen effluvium) etkili olduğu klinik olarak tanılandı. Bu sonuçlara göre serum ve şampuan birlikte kullanıldığında saç dökülmesi duruyor, dirlenme fazındaki saçlar uzama fazına geçiyor. Diğer

markalarda bu tür bir klinik destekten bahsedemiyoruz. B'iota'nın bir şirket olarak değerleri ve prensipleri arasında neleri sayarsınız?

Bioxcin'in saç dökülmemeyi önleyici markalar arasında var. Onlara her şekilde sahip çıkmaya, varlıklarını sürdürmeye çalışıyoruz. Yenilikçi ve araştırmacı, güvenilir, global, uzman, lider, çözüm odaklı, medikal ve bitkisel yöntemlerle başvuran bir şirketiz. Prensiplerimiz

R&D Departments of Turkey approved by the Ministry of Science, Industry and Technology. Our R&D Department has six different laboratories which work on developing formulas as well as scientific research projects. Cell Culture Laboratory, Plant Research Laboratory, Instrumental Analysis Laboratory, Formulation Laboratory, Scent Laboratory and Performance Test Laboratory do their work in coordination and are always in communication with one another. Our research articles are published in science magazines. We also have a large plant collection in our plant research center where we continue our research on plant extracts.

What is the key to success according to B'iota?

Always trying to do the best with brave and knowledgeable people; staying strong, continuing our hard work despite all tiredness and not being afraid of getting tired again in order to accomplish better things. We continue with

thing: Beauty. Pharmacy brands also include health to this but fundamentally; they all mean the same thing. When it comes to women beauty is a non negotiable concept, it is something women off all ages want and refuse to give up on, therefore it will not accept an approach without emotion. But you have to have a lot of knowledge and experience in order to differentiate from all the other brands. As a company who proved its knowledge on plant science, we continue to develop our brands that we are passionate about.

Is it possible to combine knowledge and emotion in a cosmetics company?

There are many cosmetic and dermocosmetic brands and they all promise to offer the same

all of our projects to serve our country and humankind, while keeping in mind our responsibilities towards the greater society and the greater good.

Is B'iota an earth friendly company? What are your efforts on this critical matter?

B'iota Laboratories work with ISO 14001 Environmental Management Systems. Per the management system and as our policy pledges, we keep a close eye on all of the environmental laws and regulations and do everything that's needed. The dangerous wastes are discarded properly and sent to recycling facilities. We work with PAGÇEV to help them reach their yearly recycling goals as well as the discarding of packaging wastes. We continue to work on ways to reduce energy, water and waste consumption.⁷

arasında ise dürüstlük, uzmanlık, tecrübe, sağlam karakter, savaşçı kişilik ve yetenek gibi kelimeler akıma ilk olarak geliyor.

Ofiste bir gününüz nasıl geçiyor?

Pazarlama ve Satış bölgeleriyle Üretim ve AR-GE departmanlarının aynı tesis içinde bulunmasından ötürü alınan tüm aksiyonların optimize edilmesi ve uygulanması mümkün olabiliyor. Dolayısıyla üst düzey bir koordinasyonla markalar, çevresel departmanlar ve tüm çalışanlar aynı ekosistem içinde sıkı bir

bir dírek temasıyla, yoğun toplantılar ve görüşmeler yaparak, karar uygulamasını yerinde ve tam zamanlı

arasında ise dürüstlük, uzmanlık, tecrübe, sağlam karakter, savaşçı kişilik ve yetenek gibi kelimeler akıma ilk olarak geliyor. Gelecek dönemde daha fazla sentetik peptid ve enzim içeren kozmetiklerle karşılaşacağız. Kozmetiklerin hücre düzeyinde test laboratuvarı, Koku laboratuvarı, Performans Test Laboratuvarı, birbirleriyle iletişim halinde koordineli olarak çalışmalarını yürütüyor. Yayınlarımız bilimsel dergilerde yer alıyor.

B'iota ailesine göre başarının sırrı nedir?
Bize başarının sırrı; cesur, adanmış ve bilge savaşçılarla, her zaman en iyisini yapmaya gayret etmek. Yorgun duştuktan sonra bile dinlenmeden

ayakta kalmaya devam etmek.⁷

BEAUTY AND THE ROSE

THE BENEFIT OF ROSE BASED BEAUTY PRODUCTS IS NO SECRET, THIS FLOWER MAKES US AND OUR SKIN FEEL LIVELY, FRESH AND BALANCED.

words betül aydoğmuş

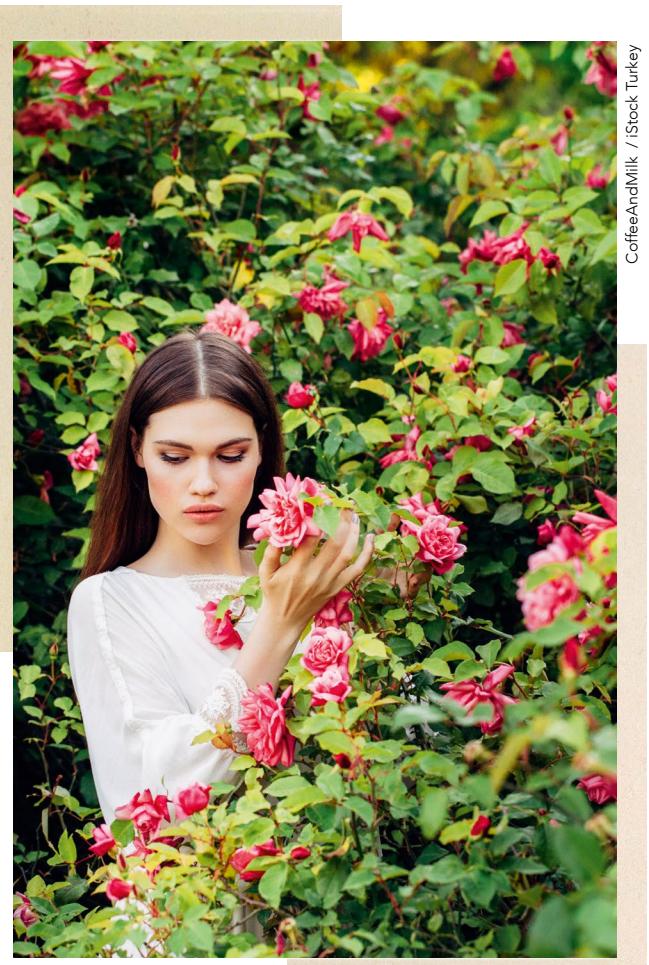

Julia Kuleshova / iStock Turkey

**ISPARTA IS
CONSIDERED
AS TURKEY'S
GARDEN,
AS IT IS THE
LEADING CITY
PRODUCING
65% OF THE
WORLD'S ROSE
OIL.**

Rose, which has a healing affect on the heart and soul, is not only a meaningful flower but also a personal grooming product discovered hundreds of years ago. With homelands of Isparta, Morocco and China, its water and oil are used as raw materials in perfumes and skin care products. When we speak of rose in Turkey, we immediately think of Isparta with its 130 years of history in rose agriculture. Isparta is considered as Turkey's garden, as it is the leading city producing 65% of the world's rose oil. Many Turkish and international companies have their rose processing factories here as well. Rose harvesting starts around the middle of May every year and continues until the end of June. The roses are picked one at a time by hand, usually before dawn, and are processed within the same day. The rose petals harvested

from the rose gardens are packed into sacks and taken to rose oil factories. There, they get processed to be used in cosmetic, food, cleaning and tourism sectors. The content of rose is used in different kinds of products: Rose jam, rose petal flavored Turkish delight, cologne, oil, water, perfume, cream, shampoo, makeup products and candles are just a few to mention. According to Isparta Cultural and Tourism Directorate, there are 1350 types of rose around the world; 24 of them are registered in Turkey's flora. The kind of rose used to produce rose oil is originally called "rosa damascena mill", which has many varieties in itself. The "trigintipetale" variety is especially

grown in Bulgaria, Turkey, Morocco, Egypt, Iran, Syria, India and the Caucasus. Rose has also been used in alternative medicine throughout history. Rose water, rose paste and rose oil are used to heal illnesses like headaches, fever, fainting and stomachache. A favorite amongst women, rose is also the raw material for many Turkish cosmetic brands like Otaci, Talya Cosmetics, Gülsah, Atelier Rebul, Queenlight, Altın Yapraç, Dalan and Gülsha. These brands offer many types of products like rose water, soap, hand cream and facial cream. Rose water is also fantastic to fix acne problems, tightening your pores and deep cleansing your face! Even though rose water is popular in Turkey, it is still difficult to find pure versions, manufacturers generally add synthetic rose scent into filtered water. Therefore, read the ingredients on the bottle, if it mentions rose essence, rose aroma or perfume, know that it is not real rose water. Real rose water is a natural tonic, it moisturizes your skin, cleans it and produces the correct moisture level. Its tightening effect prevents the clogging of pores, it adds a fresh and luminous look to your skin. Besides its nice scent, rose keeps the skin fresh and lively. After washing your face with rose water, dampen a small towel with warm water and use it to gently clean your face. If you have time, place the towel on your face and let it rest there for a while. You will immediately feel your pores breathing, your face cleansing and resting. Soaps with rose extract protect your skin from outside damages and removes any dead skin while offering an economical peeling session. Rose has been the subject of many fairy tales throughout history. Include this delicate flower into your skin care routine and while taking in its natural essence, let it do its job and beautify you.¶

GÜLÜN ADI

►TR► Kalbi ve ruhu iyileştirici etkiye sahip gül, sadece anlamlı bir çiçek değil aynı zamanda yüzüller önce keşfedilen ve güzelleşmek için kullanılan bir kişisel bakım ürünü. Ana vatanı Isparta, Fas ve Çin olan gülün, suyu ile yağı, parfüm ve cilt bakım ürünlerini hammadde olarak kullanıyor. Türkiye'de gül der demez aklimiza gelen ilk coğrafya Isparta'da, gül ziraatinin yaklaşık 130 yıllık bir geçmişi var. Buradan elde edilen gül yağı ve suyu, dünya piyasasına yüksek değerden satılıyor. Birçok uluslararası markanın kendisine ait gül bahçelerinin de yer aldığı Isparta'nın en büyük rakibi ise Fas.

Türkiye'nin bahçesi olarak kabul gören Isparta'da gül yetiştirciliği çok eskilere dayanıyor, bol yapraklı hikayemiz

sektörlerinde kullanılıyor. Gülayğı ve her türlü gül ürünü iç pazarda tüketilmekten yanı sıra dünyanın çeşitli yerlerine ihrac ediliyor. Gül, içeriğ olarak birçok farklı ürünle kullanılıyor. Gül reçeli, yapraklı lokumu, kolonyası, yağı, suyu, parfümü, kremini, şampuanı, makyaj ürünleri, mumu burlardan bazlıları.

Isparta İl Kültür ve Turizm Müdürlüğü'nün verdiği bilgiye göre dünyada yaklaşık 1350 gül türü tanımlanıyor, bunların 24'ü Türkiye florasında kayıtlı. Gülayğı elde etmek amacıyla kullanılan tür ise orijinal adı "rosa damascena mill" olan yağı gülü. Bu türün birçok çeşidi var. Özellikle "trigintipetale" çeşidi başta Bulgaristan ile Türkiye olmak üzere Fas, Mısır, İran, Suriye, Hindistan ve Kafkaslar'da

gülüğü elde etmek amacıyla yetiştiriliyor. Gül tarhi boyunca alternatif tıpta da kullanılıyordu; gül suyu, gül macunu ve gül yağı olarak işlenen gülün, bu üç ayrı şekilde baş ağırsızlığı, ateş, bayılma, mide ağrısı, göz kanlanması gibi rahatsızlıklara iyi geldiği biliniyor. Kadınların her alanda gönlünü kazanan gül, Otaci, Talya Cosmetics, Gülsah, Atelier Rebul, Queenlight, Altın Yapraç, Dalan, Gülsha gibi Türk kozmetik markalarının da ana hammaddeyi göz bebeği. Bu markaların gül suyu, sabun, el kremini ve yüz kremini gibi birçok ürününü bulmak mümkün. Tarih boyunca farklı efsanelere konu olan, bu nuzenin cilt bakım rutinizi mutlaka ekleyin, sizin güzelleşmenizin keyfini çıkarın.¶

ANTI-AGING FOR EVERY AGE

WHETHER YOU ARE 20 OR 40, YOU CAN HAVE HEALTHY, VIBRANT AND YOUTHFUL SKIN AT ANY AGE. THE KEY: DIAGNOSING EARLY ON.

words nilay yalçınkaya

Unfortunately, it's impossible to wipe away the consequences of time on our skin. Even though there is no miracle of this sort, with the advancing technology, the cosmetics and beauty world is fighting to minimize the aging effects as much as they can. So the first step is anti-aging: We can increase the quality of our skin, if we step in and begin treatment with the first wrinkles. When the collagen and elastic fibers under the skin lose their effectiveness, our skin slowly loses its quality, especially when exposed to ultraviolet rays. As a result, first thin lines and wrinkles appear, then in the next stage we lose elasticity and our skin begins to sag. Starting the fight against aging skin in your 20s when it's fresh and youthful will take you to the next level. Choose the correct treatment for your age and you're ready to go!

20s

AT WAR WITH ACNE

Acne and pimple problems that start usually during our teens continue on into our 20s. The main issue here is cleansing, since the skin's sebum levels are at its highest during this time.

20'ler

AKNE SAVAŞI

Bu yaşlarda cildinize ihtiyacı olan nemi verirseniz ilerli yaşlara da yatırım yapmış olursunuz. Sivilcelerinizin yaşılmamasını sağlamak içincé içinde salisilik asit bulunan cilt bakım ürünlerini tercih edin. Eğer uzun süredir geçmeyen ve içeriği iltihaplı sivilceleriniz varsa mutlaka bir dermatoloğa gidip sorunun kaynağını öğrenin. Çünkü bazı hormonal bozuklıklar da sivilce oluşumuna yol açabiliyor. Detaylı bir inceleme size en iyi sonucu verecektir.

Dirt, oil and make-up residue clog pores, resulting in pimples especially in combination to oily skin. To avoid this situation, concentrating on cleansing is extremely important. Make sure to wash and apply tonic with products for your skin type in the morning and at night. A big mistake here is thinking you don't need a moisturizer since your skin is oily, but this is one of the most vital aspects: Having oily skin doesn't mean it doesn't need moisturizing. Moisturizers create the basis for healthy and youthful skin. Apply a water-based moisturizer to your skin after washing morning and night. If you provide your skin with the moisture it needs during these years, then you would have already invested into the future. Choose products that contain salicylic acid to control pimples because it miraculously helps remove excess oil, peel the skin and unclog pores. In addition to that, it relieves the redness and inflammation created by acne. Since salicylic acid is a powerful active ingredient, it may cause skin to become dry and sensitive, so if you have any scars or infected pimples make sure to apply carefully. If you have infected pimples that haven't been responding to your skin care, make sure to go to a

YAŞINIZI DONDURUN

Bu yüzden kullandığınız günlük nemlendiricinin kırışıklığına karşı koruma özelliğini gösterin. Zengin içeriğe sahip serumlar ve yoğun bir formüle sahip olan yeni nesil bakım yağları bunun için etkilidir. Hem cildinizin nem ihtiyacını karşılayacak hem de hücre yenilenmesine destek verecek ürünlerde daha genç ve sıkı bir cilde sahip olabilirsiniz. Yüzde genel olarak en dikkat çeken şeysse göz çevresindeki ince kırışıkların ve kazayağı çizgilerinin kendini belli etmesi. Oldukça ince ve nazik bir cilt dokusuna sahip olan hassas göz çevresi için normal günlik

dermatologist to find out the source of the problem. Problems in hormone levels may lead to more pimples. A detailed research will give you the best results. Another important factor in your 20s is to keep skin young and vibrant by taking precautions against the sun. In order to get in front of blemishes and early aging skin, get into the habit of applying a moisturizer of at least 30 SPF before going outside. Also, start using anti-aging skin products from 25 onwards for those thin lines that slowly begin to appear.

MOST IMPORTANT RULE IS TO CLEAN

The most essential part here is to keep skin clean and moisturized at a time when skin oil levels are high. The biggest misconception is to not apply moisturizers because 'skin is oily.' Our skin's oiliness and moisture levels are different from each other and even oily skin needs moisture. Therefore, avoid using rich and oily moisturizers and focus on adding a water-based moisturizer for your skin type in your daily routine. Don't forget that the more you moisturize in your 20s, the more you invest towards a better skin later on.

nemlendiricinizin dışında ekstra bir göz kremi kullanmayın. Ayrıca göz pinarlarından kaslarının başlangıç yerine kadar ters hareketle masaj yaparak esnekliğini de artırabilirsiniz. Temizlik konusundaysa hassasiyetini koruyun ve sabah akşam bir temizleme jeliyle yüzünüüzü yıkayın. Genel olarak cildinizi koruma altına almak için nar ve üzüm gibi güdü antioksidan özelliği sahip olan doğal içerikli ürünler tercih edebilirsiniz. Hatta doğal üzüm çekirdeği ve nar gibi antioksidan meye yağlarını kapsül olarak ağızdan alarak cildinizin içten beslenmesine des-

30s

BE SMART, INVEST IN YOUR YOUTH

Regrettably, our skin's oil levels that we had in our 20s begin to drop in our 30s. Along with that, moisture levels quickly fall as well. It's crucial to remember that unless you act early, the effects of aging will start to show even more as thin lines become more and more obvious. So, our skin not only needs to be moisturized but we also see that we need to use more anti-aging skin products. For this reason, make sure to use daily products that fight against wrinkles. Serums with rich contents and formulas with new generation oil treatments are effective here. A more youthful and firmer skin can be attained with products that meet the skin's moisture levels and support cell regeneration. Generally, the thin wrinkles around our eyes and between our eyebrows are what stand out the most. Alongside your daily moisturizer, begin using an eye cream for the area around your eye because it's the gentlest and thinnest part of our skin. Apply moisturizer by massaging it onto the skin. Increase blood flow by applying with fingertips in circular motions. Massaging the corner of our eyes to where our eyebrows begin in an opposite C motion can also increase skin elasticity. Make sure to continue your skin cleaning routine morning and night with a face wash gel. Don't forget that the first step to young and healthy skin is cleaning. If you have very dry skin, don't use a tonic because this will result in even drier skin. Opt on using natural ingredient products with strong antioxidants such as pomegranate and grape to keep skin under control. In fact, taking pills of grape seed and pomegranate oils as supplements will also nurture your skin from inside. We would also recommend taking advantage of the power of hyaluronic acid for a brighter and younger skin. Alongside moisturizing our skin, it also creates miraculous results in the fight against fine lines. It's able to moisturize every part of the skin with its water retention feature. Besides that, it acts as a preventative against the first signs of aging skin by diminishing the look of fine lines and wrinkles. We say try it.

BRIGHTEN UP

It's not all in your head: Skin really does get duller and skin cells get sluggish around your thirties. Dead cells sit around longer and rob skin of luminosity. To get rid of them, use a glycolic acid peel once or twice a week before bed, and then moisturize to prevent irritation. Glycolic acid is one of the most effective exfoliators because it penetrates more deeply than other acids. Keep that in mind.

40s

FIGHT AGAINST THE LOSS OF ELASTICITY

In the 40s, skin has entered its maturing stage where fine lines and wrinkles are now unfortunately unavoidable. Of course the wrinkles that appear when we smile are become more visible. Alongside this, dark spots, blemishes and elasticity loss have now appeared, but with the correct skin care products you can enjoy 40 at its best. In this stage, skin has lost its former brightness and energy. Get into the habit of using peeling methods frequently to get rid of the tired, dreary look. By doing this two or three times a week, in just a short time your skin will be brighter and more vibrant. Electronic face-washing brushes will also help for a deeper cleansing. Retinol is the most valuable ingredient in your 40s. The indispensable ingredient against aging skin, retinol is the key to a fresher, younger and firmer skin. It is the purest and most active form of Vitamin A, which helps skin cell regeneration and reduces the appearance of wrinkles and thin lines. Cosmetic products with retinol can also work against the loss of skin elasticity and help fight against blemishes. By the way, when the retinol content is high in products it may cause irritation in some skin types so before using apply to another part of your body to see if there is a bad reaction or not. Don't forget to use SPF to get in front of blemishes from age spots.

PUT SOME DISTANCE BETWEEN YOU AND THE SUN

Yes, we love the sun and tanning but we cannot ignore the negative impacts it has on our skin.

tek verebilirsiniz. Daha parlak ve genç bir cilt için hyalüronik asitin gücünden yararlanın deriz. Cildinizin nem ihtiyacını karşılamak için çerezlerde mücadele eden hyalüronik asit ciltte mucizevi sonuçlar yaratıyor. Su tutma özellikle cildin tüm nem ihtiyacını karşıyor.

40'lар

ESNEKLİK KAYBIYLA MÜCADELE EDİN

Cilt bu dönemde eski parlaklığını ve enerjisini kaybetmiş oluyor. Yüzünüzüdeki matlıktan ve yorgun görünümünden kurtulmak ve daha aydınlatıcı bir cilde sahip olmak içi

peeling kullanmayı alışkanlık haline getirin. Haftada iki ya da üç kere bunu yaparak kısa bir süre sonra yüzünüzün daha parlak ve canlı görünüşünü farkedeceksiniz. 40'lı yaşlarında en değerli içeriğiniz retinol olmalı. Yaşlanma karşıtı bakımın vazgeçilmez içerikleri arasında yer alan retinol, taze, genç ve sıkı bir cildin anahtarı diyebilir. A vitaminiňin en saf ve aktif hali olan bu değerli içerik, cilt hücrelerinin yenilenmesine, kırışık ve çizgi görünümünü azaltmasına yardımcı oluyor. Cildinizdeki sıklık kaybıyla ve ton eşitsizlikleriyle mücadele etmek için retinol

icerikli kozmetik ürünlerden yardım alabilirsiniz. Bu arada retinol yoğun ve kuşaklı bir yapıya sahip olduğundan bazı ciltlerde hassasiyete neden olabilir. Bu yüzden ilk kullanımından sonra cildinizin herhangi bir reaksiyon verip vermeyeceğini kontrol edin.

50+

YÜZ HATTINIZI YENİDEN ŞEKKİLENDİRİN

Derin kırışıklıkların belirginleşti, elastisitetini yitiren ve kurumaya başlayan cildiniz için şimdi yoğun bakırma hizlızlı olun. Etkili ve güçlü anti-aging özelliklere sahip

Despite its effects on the surface on our skin with freckles, blemishes and wrinkles, it can also lead to damaging results all the way down to our DNA. It can even lead to skin cancer. Therefore, no matter what age you are get into the habit of protecting yourself from the sun. If using an extra protection cream is too difficult, make sure your daily moisturizer is at least 15 SPF. Also, don't just apply it during the summer, but also in the winter.

50+

REDEFINE YOUR CONTOUR

Prepare for a more intensive skin care now that skin is dry, losAt its elasticity and wrinkles are more visible. If creams with effective and powerful anti-aging ingredients are not enough, medical options are also available. Stick with cosmetic products that include peptide for age related sagging and spots. Other than its regenerative and restorative properties, peptide is a powerful ingredient that works towards brighter, younger skin with its antioxidant effect it helps the skin produce more collagen. It's quite effective in reducing the appearance of wrinkly skin and blemishes that we especially see in ages 50+. Apart from losing the oval shape of our faces, at this age our greatest dilemma are the wrinkles around the mouth area. If cosmetic products here seem inadequate, Botox can help. Botox can be used for wrinkles on the forehead, lips, and in between eyebrows. You can also resort to plastic surgery if cosmetic products yield no results and if it's necessary.

YOUR HANDS MATTER

By the way, another big mistake at our 50s is that we forget our hands. You can always tell the age of a woman just by looking at her hands. If your hands are extremely dry and aren't moisturized, they tend to look older. Make sure you take extra care to moisturize hands if you don't want to give away your age. Apply moisturizer during the day and after washing your hands. Be careful not to wash hands with very cold or very warm water. When all of these options are not enough, know that you can always try botox.⁷

Meet the BEAUTY Where the Continents MEET!

THE FUTURE IS NOW

IN A FUTURE WHERE THE LINE BETWEEN HUMAN AND TECHNOLOGICAL DEVICE BLURS, WATER BECOMES A PROTECTED RESOURCE, ENERGY CONCERNS RING TRUE AND NATURAL INGREDIENTS TAKE CENTRE STAGE, HOW WILL BEAUTY BRANDS INNOVATE TO STAY COMPETITIVE?

words vivienne rudd / director of global insight and innovation, beauty & personal care / mintel

AUGMENTED HUMAN

Imagine a world where humans and beauty products are so connected that the entire home is a working laboratory. Bathroom mirrors automatically assess what consumers need to put on their skin and hair, on-demand DNA analysis explains how products work in the short, medium and long term, devices whip up the perfect combination of ingredients and dispense them in the ideal format or pump them out via the shower head, whilst high-res scanners and 3D printers help users track results over time. This bathroom laboratory is closer than people might think, thanks to ongoing work with augmented and virtual reality, diagnostics, tracking devices and customised formulations. The line between human and technological device is blurring as smart technology puts consumers in greater control of their individual health and beauty needs. It may seem implausible, but a bathroom laboratory is closer to existing than consumers might think, thanks to ongoing work in augmented and virtual reality, diagnostics, and customised formulations. Indeed, the rise in popularity of wearable technology has given consumers unprecedented insight into the inner workings of their own body. Mintel research shows that almost one in five Chinese consumers own a wearable device, while nearly half of UK skincare users would be interested in an app

that can be used to track changes in their skin or moles. In the future, beauty devices will move underneath the surface of the skin, with implants that provide additional hydration, nutrition and protection from the elements over a sustained period. Furthermore, advancements in technology will trickle down from the laboratory to the retail space, helping improve the shopping experience. This is especially true among consumers who have experienced similar products and services before, as notably almost two thirds of Chinese consumers who buy luxury goods are interested in interactive or digital experiences available in-store such as virtual mirrors, virtual reality headsets and interactive displays. As consumers become increasingly familiar with using technology to track their health and well-being, they are looking for beauty brands to offer products and devices that boast similar functionality. New product development in augmented reality is providing the next step in virtual mirrors and real-time visualisation of the effects of beauty products on the skin and hair. What's more, wearables will increasingly become part of the body, from micro patches that monitor skin condition to ingestibles that send information to connected devices from the stomach, tracking the movement and efficacy of beauty supplements. However, as new technology enables consumers to track the impact of beauty products, brands will be under greater pressure to prove efficacy.

WATER: THE NEW LUXURY

Water is set to become a precious commodity as consumption outstrips supply. In a future where water becomes a protected resource, bubble baths and lawn sprinklers will become unthinkable luxuries and rationing will be second nature to people everywhere. Beauty brands will need to change how they manufacture and formulate products to limit their dependence on water. Using water the way consumers have in the past will simply not be viable in the years to come. Currently in the UK, one third of consumers say they would pay more for fixtures that save on water or energy bills. As consumers cut back their usage they expect brands to do the same, and some are already taking notice. Where water was once an essential part of some beauty regimes, new environmental formulations require little or no extra water in order to function. Our research shows growing consumer interest in alternative water sources that do not place any additional strain on existing resources, and we will see brands scour the earth to find them in order to gain a competitive edge. These products can be positioned as eco-friendly, as well as a source of exclusivity. Brands will not only source water from different oceans, lagoons and glaciers, but they will climb mountains and harvest fogs to gain the purest possible droplets. The key to beauty brands' success lies in younger consumers' adoption of these innovative measures. They must appeal to their youthful idealism, passion and desire to change the world with products that clearly state how they are addressing the issue of water shortages. There will also be a greater need for brands to help consumers control their water usage, and transparency will come to the forefront like never before. There will be a greater need for brands to help consumers control their water usage and form better habits by creating devices that can switch off when an allotted amount of water has been used or can inform consumers when a certain amount of time has elapsed. Providing easy-to-access information about water usage will be something empowered consumers come to expect.

POWER PLAY

Consumers are facing an energy crisis as the pace of modern life catches up with them. Aware of their need to make long-term lifestyle changes, beauty brands are delivering products that put energy claims at the forefront. As energy levels are becoming a key concern for consumers around the world, Mintel research indicates nearly four in five UK adults hate feeling low on energy. What is more, in the US, tiredness or fatigue ranks second as a health concern. The first approach some consumers will adopt is a more holistic approach to health and wellness issues. Rather than addressing problems individually, they will pursue a more healthy lifestyle as a whole. In China, facial skincare users make clear links between lifestyle, fitness and the condition of their skin, with approaching three quarters wanting to improve their skin by improving the quality of their sleep and over half wanting to get more sleep. Sleep, exercise and diet also top the list of Brazilian health issues, whilst one third of US men say they exercised more in 2015 than they did the previous year. Beauty brands will need to partner with food, drink and leisure brands to create healthy living product ranges with ingredients and claims

that complement one another. Secondly, consumers will increasingly look for products that complement their wider lifestyle shift. Energy claims are on the rise across the whole beauty and personal care market with data from Mintel's Global New Products Database showing that facial skincare products featuring energy claims represented 12% of global launches from January to October 2015, up from 10.5% in 2015. Energy efficiency claims will be key in the coming decade as consumers battle against fatigue. Brands must tangibly illustrate how their products can impact consumer energy levels for the better, though work on energy-boosting products is already underway, particularly in skincare and haircare products. We should expect to see more haircare brands improve the condition and longevity of the hair by stimulating cellular energy. A new generation of colour cosmetics will also emerge, enhancing the energy levels of the skin as well as its outer appearance.

GASTRONOMIA

The saying goes, 'it's what's on the inside that counts', and there is no better way of knowing the ingredients of a product than preparing it yourself. Beauty products are coming out from

GELECEK ŞİMDİ

Önümüzdeki yıl içinde güzellik sektörüne gelecek dört yeni trend sayesinde müşteriler ve markalar arasındaki dinamik ilişki, endüstrinin gelişmesine yardım etmekle birlikte, köklü değişiklikler de getirecek. Gelecek yıllarda güzellik sektöründeki yenilikleri yönlendirecek kişisel teknoloji ve doğal malzemelerde şiddetli bir kontrast katmanlarına kadar inerek, daha uzun süre nemlendirici, besleyici ve koruyucu özelliklere sahip olacak. Artırılmış teknolojile üretilen yeni ürünler, zamanla birlikte günlük yaşamın daha fazla parçası haline gelecek. Bu ürünler arasında, cildin halaslaşacağı dört güzellik akımı, heyecan verici günlerin bizi beklediğine işaret ediyor.

Akıllı Güzellik

Akıllı aletlerin gelişmesiyle birlikte, tüketiciler kendi sağlık ve güzellik ihtiyaçlarını daha iyi kontrol edebilmesi, insanlar ve teknolojik aletler arasındaki çizgisi bulandırıyor. Gelecek yıllarda güzellik ürünleri cilt yüzeyinin alt katmanlarına kadar inerek, daha uzun süre nemlendirici, besleyici ve koruyucu özelliklere sahip olacak. Artırılmış teknolojile üretilen yeni ürünler, zamanla birlikte günlük yaşamın daha fazla parçası haline gelecek. Bu ürünler arasında, cildin halaslaşacağı dört güzellik akımı, heyecan verici günlerin bizi beklediğine işaret ediyor.

Yeni Lüksünüz Su

Su, ilerde tüketim kaynakları azaldıkça değerli bir ihtiyaca dönüşecek. Güzellik markaların ürünlerini imal ve formülle etme yöntemlerini suyun kullanılabilitirlik durumuna göre limiteyecekler. Çoğu güzellik rutinin büyük bir parçası olan su, gelecek yıllarda çakmak ürünlerin kullanımında az miktarda ya da hiç reklami olmayacak.

Gastronomi

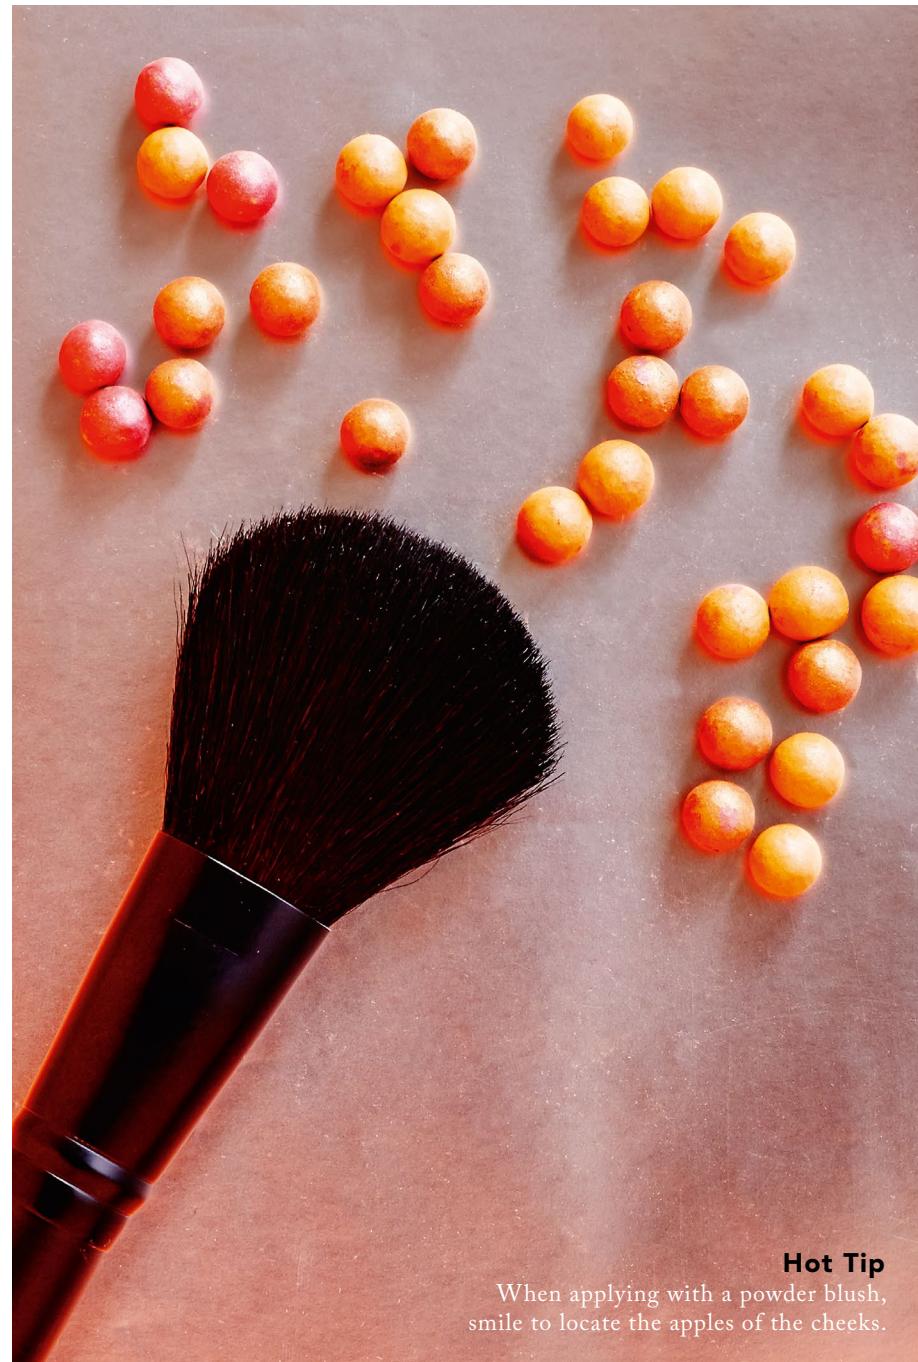

Bir ürünün içeriğini en iyi kendiniz hazırladığınızda görevlendirsiniz. Güzellik ürünleri, laboratuvarların gölgelerinden çok, tüketicilerin mutfak tezgahlarına gelir. Bu trend, güzellik perakendeçilerinin supermarketlerde olduğu gibi raflarına daha doğal malzemelerden oluşan ürünlerle doldurmalarına yol açacaktır.

the shadows of laboratories and into the spotlight of consumers' kitchen counters. Attitudinal changes toward natural ingredients have acted as a catalyst in the rise of 'kitchen beauty' – products that can be made at the kitchen table, but still reflect the latest beauty styles – and is driven by a desire for consumers to feel in control of their beauty products. Mintel research highlights that half of UK men believe facial skincare products with natural ingredients are better for the skin. Additionally in the US over half of consumers purchase them because they don't contain unnecessary ingredients or chemicals and nearly half of Italian and Spanish consumers buy natural and organic personal care products because they believe the products are better for their health. Traditional beauty and personal care remedies are moving into the mainstream as more and more consumers start to 'cook up' their own versions. This doesn't mean that brands can't engage with these consumers, but rather that their focus needs to highlight artisanal processes while also doing the legwork and making it easier for consumers to construct products at home. This will inspire beauty retailers to emulate supermarkets with aisles of natural ingredients in their raw and freeze-dried states, to help consumers whisk up beauty products in their own kitchens and play with textures and fragrances to give them an energy burst in the morning or calming treatment in the evening. Looking at the decade ahead, we'll see brands borrow inspiration from the meal kits developed by food companies, propelling the subscription beauty box model to the next level. Consumers would receive complete kits of ingredients or phases or products, which can be combined to create a finished product. With the ever growing interest in pursuing more natural lifestyles, consumers will find themselves getting involved in the creation process to ensure their beauty and personal care products are more transparent.

EU COSMETICS COMPLIANCE

DO YOU EXPORT COSMETICS TO THE EU MARKET?

- Are your products duly notified to the EU authorities?
- Is your product labelling compliant with the EU regulation?
- Are you sure your products will not end up in the EU restriction list?
- Did you take all necessary measures in order not to be banned from the EU market?

If you answer “NO” to these questions you should quickly contact us for:

- Having a Product Information File (PIF) in conformity with the EU regulation
- Issuing your Product Safety Assessment
- Appointing your Responsible Person (RP)
- Making sure your labeling is compliant with the EU cosmetics regulation
- Getting your products notified to the EU's CPNP database
- Providing response to the EU competent authorities in a timely manner
- Keeping your PIF updated and your labeling compliant

NURETTİN TARİ POLISH YOUR SHOES PROPERLY

WHEN YOU BUY A PAIR OF SHOES THAT YOU FALL IN LOVE WITH, IT IS NECESSARY TO TAKE CARE OF THEM PROPERLY FOR A LONG LASTING RELATIONSHIP. FOR THE LAST TWELVE YEARS, GOLD KİMYA HAS BEEN PRODUCING CARE PRODUCTS THAT ARE PRACTICAL AND EFFICIENT TO CATER THIS NEED.

questions seda güler photography gökhan polat

How did Gold Kimya enter the sector?

It actually happened incidentally in 2003. At the time, the company was operating with another name, we were supplying them with the raw materials needed for the plastic product containers made with injection machines. In the beginning of 2003 we took over the company and changed the name. Throughout the process we increased our technology, staff sufficiency and investments thus strengthening our "know how". Of course in the beginning our range of products wasn't as wide as it is today, but we had a strong presence in the shoe dye market, especially in Turkey. With its 10-year long history, our brand GOLD had a solid infrastructure on dye production and formulation. Today, our company has more than 20 years of experience in shoe dye production.

You produce shoe care products. What are these products' main goals?

Shoes are accessories that help bring out peo-

ples' personalities. Our company slogan is: "Shoe addiction starts at a young age." The most important goal about shoe care products is to make the shoe better. The dye should feed the leather, increase its softness and prevent any cracks that may happen on the leather. This, of course, depends on the quality of the natural wax, resin and other chemicals. Many of our products belong to the ready to wear shoe dye, which means you can use the product, let it rest for a few minutes, and you will not need to brush and clean up anything.

So what do we need to pay attention to when we are using your dyes?

The most important point a consumer needs to pay attention to is this: Remove any dust and dirt off of a shoe before applying the dye. If possible, clean up any remaining dirt and dust with a damp cloth. Wear your shoes every other day; they need to rest in between. Also,

»**AYAKKABILARINIZA İYİ BAKIN**«

TR Gold Kimya sektöré nasıl bir giriş yaptı?

2003 yılında biraz da tesadüf olarak girdik sektörde. O tarihte firma başka bir üründen faaliyet göstermektediydi, biz de onlara enjeksiyon makinelerinde üretilen plastik ürün kapları için ham madde tedarik ediyorduk. 2003 yılında firmayı devir alarak üründen değişikliğine gittik.

Sürek içerisinde teknolojimizi, personel yeteneklerimizi ve yatırımlarımızı artırtarak "know how" bilgimizi güçlendirdik. Tabii ki ilk başlarda ürün çeşitliliğimiz konusunda yardımcı aksesuarlar. Firma olarak çok fazla değişti fakat ayakkabı boyası piyasasında, özellikle Türkiye pazarında tüketici tarafından bilinen,

ayakkabıya katkı sağlaması. Kullanılan boyalar deri ve formülasyon çalışmalarında bir alt yapımız vardı ve bugüne kadar üzerine koyarak geldik. Bugün, firmamız ayakkabı boyası üretimi konusunda 20 yıl üzerinde birincilik sahibi.

Ayakkabı bakımı üzerine ürünler üretiyorsunuz, bakım ürünlerinin ana hedefi nedir?

Aslında ayakkabılar, insanların kişiliğini öne çıkarmak konusunda yardımcı aksesuarlar. Firma olarak sloganımız "Ayakkabı Tutkusu Çocuk Yaşa Başla". Bakım ürünlerinde en önemli unsur kullanılan ürünün

kalitesiyle doğru orantılı. Bizim ürünlerimiz büyük bir bölüm hazır ayakkabı boyası grubuna ait, bu da ürünü kullanıp birkaç dakika bekledikten sonra fırçalama ve temizlemeye gerek kalmaması anlayışına gelir.

Peki boyalarınızı uygularken dikkat etmek gereken noktalar hangileri?

Tüketicinin dikkat etmesi gereken en önemli nokta şu:

"WE CHOSE THE ELEPHANT FOR OUR LOGO WITH ITS HOSE FACING UP, BECAUSE WE HAVE LEARNED THAT IF THE HOSE POINTS UP, IT MEANS GOOD LUCK."

when you wear the same pair all day long, you take away from the time the leather needs to breath. During season changes when you are going to switch to more season appropriate shoes, it is important to store away out of season shoes properly. Apply a new coat of dye and leather oil, place a shoe shape holder to increase the shoe's life.

When and how did the GOLDCARE series come to life?

When we took over the company, there were only a few products under the GOLD name. We created the GOLDCARE product line in the beginning of 2004, which was a long process. We started with designing the logo and continued working on the slogan and packaging design. We chose the elephant for our logo with its hose facing up, because we have learned that if the hose points up, it means good luck. Elephants clean themselves with

Boya uygulanmadan ewel ayakkabı, üzerindeki toz ve çamurdan mutlaka arındırılmalı. Mümkünse nemli bir bezle çamur ve toz kalıntıları temizlenmelidir. Ayakkabılara gün aşırı giyilmeli, iki günde bir mutlaka dirlendirilmeli. Her gün tek bir çift ayakkabının giyilmesi durumunda derinin teneffüs etmesi için ihtiyaci olan zamanın çalınmış olur. Mevsim değişikliklerinde uzun bir süre kullanmayı düşündürdüğünüz ayakkabınızı saklama şekli de önem taşıyor. Onları boyayıp, deri yağıyla bakım yapıp içine kalıp koyarak muhafaza etmek, ayakkabının uzun yıllar kullanılmasını sağlar.

their hoses; our products are self-cleaning, so this similarity was meaningful for us as well. In addition to that, the elephant skin is very though and strong. We try to strengthen leather and improve their longevity with our products, just like elephants we take strong and stable steps. We chose green and gold as our corporate colors. In summary, after this long process, we've arrived to this day, where the GOLDCARE brand produces 35 different types of products.

Which products are the most popular?
The products we sell most to consumers are cream dyes, liquid dyes, shining sponges and suede shoe dyes. Our brand focuses on practical products that are self-shining, which have an "apply-and-leave" quality to them. This concept of practicality is getting more popular around the world, because people don't have much time for anything anymore. A few years

ago, we added FABCARE product group to our GOLDCARE line. This group appeals to the classical use, you need to brush your shoe after the application. It is generally produced for shoe stores and shoe repair stores where they use it more.

How is GOLDCARE received in foreign markets?

The foreign market is one where, like all the other producers, we can create alternatives. However, if a brand hasn't been successful in its local market, it is very difficult for it to succeed in the foreign market. We worked towards strengthening our presence in our local markets before expanding to overseas.

For the last 8 to 10 years, we have been selling GOLDCARE products in various chain supermarkets in Turkey. We sell to more than 75 countries around the world and we are also leaders in many countries. Besides dye produc-

tion, we also produce the plastic containers of the products, creating wholeness amongst our series.

How is the wholeness important for a shoe dye?

If the product container doesn't close well or is not ergonomically produced, the dye inside will dry out quickly and lose its characteristics. So while we produce dyes, we also work on projects with plastic technology and plastic product design.

We are sure you have some exciting new projects coming up in the near future. Can you talk about those?

We definitely have projects in new areas of work, some of them are almost finished and some of them are still in the research phase. What excites us most is to put out a new product on the market and see the customer's reaction to it. We know we did a good job when

GOLDCARE serisi ne zaman ve nasıl hayatı geçti?

Firmayı devir aldığımızda sadece GOLD adı altında birkaç ürün çeşidi vardı, 2004'ün başında GOLDCARE ürün grubunu hayatı geçirdi. Bu da uzun bir süreç oldu. İşe logomuzdan başladık, slogan ve ambalaj tasarımlarıyla devam etti. Logo olarak kendimize fili seçtik, hatta filin hortumunun yukarı doğru olması gereki

rdi. Filler de kendilerini hortumlaryla temizliyor, bizim ürünlerimiz de self-cleaning üzerine olduğunu için bu detay da anlamlı geldi, amaçımızla birebir

örütüşüğünü düşündük. Ayrıca fillerin derisi çok sağlamdır. Bize ürünlerimizle derisi sağlamaştırmaya, ona uzun bir ömür yaratmaya çalışıyoruz. Aynı filler gibi biz de kuvvetli adımlarla ve kararlılıkla yürüyoruz. Yeşil ve altın rengini kurumsal renklerimiz olarak seçtik. Sonuç olarak bugün 35 farklı kaleme ile üretiliyoruz GOLDCARE markasıyla.

En çok hangi ürünleriniz ilgi görüyor?

Tüketiciler nezdinde en çok talep gören ürünlerimiz krem boyalarımız, lükt boyalarımız, parlatma süngerlerimiz yaratmak adına uğraş verdiği bir pazar. Kendi pazarında lokal olarak markaya dönüsememiş herhangi bir firmamın yurtdışında marka olabilmesi çok nadir bir durum. Biz

dünyadaki konseptin de bu yöne gittiğini gözlemliyoruz. İnsanların hiçbir şey için fazla vakit yok artık. Birkac yıl önce GOLDCARE'in yanına FABCARE ürün grubunu da ekledik. Bu grup, klasik kullanım anlayışına hitap ediyor, kullanıldıkları sonra fırçalanması gerekiyor. Genel olarak ayakkabı mağazaları ve loşolar için üretiyoruz.

GOLDCARE, yurt dışında nasıl karşılanıyor?

Yurt dışı, bizer gibi her üreticinin kendisine alternatif yaratmak adına uğraş verdiği bir pazar. Kendi pazarında lokal olarak markaya dönüsememiş herhangi bir firmamın yurtdışında marka olabilmesi çok nadir bir durum. Biz

öncelikle kendi pazarımızda bilinirliğimizi artıracak yurtdışı pazar çalışmalarımıza devam ettik. Türkiye'nin önemli market zincirlerinde GOLDCARE markamızla son 8-10 yıldır varız. Firma olarak 75 ülkenin üzerinde satmışız var, birçok ülkede lider marka pozisyonundayız. Boya üretiminin yanında ürünlerin plastik kaplarını da üretiyoruz, bu anlamda bir bütünlük yaratıyoruz.

Bu bütünlük ayakkabı boyası için ne gibi bir önem taşıyor?

Eğer kullandığınız ürün kabı iyi kapanmazsa ya da kullanıma uygun bir ergonomik yapıya sahip değilse

"WHAT EXCITES US MOST IS TO PUT OUT A NEW PRODUCT ON THE MARKET AND SEE THE CUSTOMER'S REACTION TO IT. WE KNOW WE DID A GOOD JOB WHEN THE CUSTOMER APPROVES THE PRODUCT AND WE GET MORE ORDERS."

Can you talk about Gold Kimya's innovative approach to nanotechnology? What kind of works are you doing in this field?

The most important question we need to answer in this field is this: How does dye affect the leather's surface, how does it allow the leather to breathe more easily and how can it lengthen leather's life? We also research ways to protect it from external factors like rain, snow, sun and dust. We are also a company that produces within the Ethical Production Process scope. We belong to a European system called SEDEX, which gets checked by SMETA once a year. The goal here is to secure disciplined regulations within companies to protect the production line workers' labor conditions, social rights, workspaces and work place security. Each company gets points in these subjects and then become members of the system.

What would be the initial three steps for somebody who just started caring about their shoes?

The most important thing is not underestimating shoe care and paying close attention to using the right products. The shoe needs to be kept clean at all times; wipe it with a damp cloth every two weeks and apply a coat of dye. Using shoe shape holders to protect the shape is another important detail. Our FABCARE line has some beautiful wooden shoe shape holders for this, sold in shoe repair stores. For sweaty feet, you can also use inserts that are sweat-absorbent and help with circulation.

Do you have a big shoe collection or do you have a "less is more" approach to shoes?

I believe in the "less is more" approach. This also allows me to frequently use our own products.TM

icensine konan boyası kısa sürede kurur ve özellikle yurtdışı pazar çalışmalarımıza devam ettik. Türkiye'nin önemli market zincirlerinde GOLDCARE markamızla son 8-10 yıldır varız. Firma olarak 75 ülkenin üzerinde satmışız var, birçok ülkede lider marka pozisyonundayız. Boya üretiminin yanında ürünlerin plastik kaplarını da üretiyoruz, bu anlamda bir bütünlük yaratıyoruz.

Emin özümüzdeki dönemlerde hayatı gececek heyecan verici projeleriniz de vardır, onlardan da biraz bahsedebilir miyiz?

Yeni çalışmalarımız elbette var, bazıları bitmek üzere, bazıları da tasarım aşamasında. Yeni bir ürün piyasaya sürmek ve onu tüketicinin beğenmesine sunmak bizi en çok enjeksiyon, plastik şişirme, boyahane dolum hatları, kaliphane gibi süreçleri tamamen kendi bünyemizde tamamlıyoruz. Dışarıdan sadece ambalaj tasarıma

o zaman ışımızı doğu yapmışız demektir. Yeni projelerde genellikle tüketicinin kullandığı ayakkabı çeşitlerine odaklıyız; deri, tekstil, süet, nubuk gibi. Gelecekteki konseptlerin ne olacağını ve onları anlayabilmek çok önemlidir.

Üretiminizi nerede gerçekleştiriyorsunuz?

Bu alanda bizim için cevaplanması gereken en önemli soru: Boya derinin nüfusuna nasıl daha fazla etki eder, derinin daha rahat nefes almasını nasıl sağlar ve derinin ömrünü ne kadar uzatabilir? Onu yâjmur, kar, güneş ve toz gibi dış etkenlerden korumanın da yollarını arıyoruz. Ayrıca Etik Üretim Prosesi kapsamında üretim yapan

firmalarımız SEDEX denilen ve senede en az bir kere yapılan SMETA denetimlerine tabi olan Avrupa'daki bir sistemin parçası. Buradaki temel amaç üretimden sorumlu arkadaşlarınızın çalışma şartları, sosyal hakları, yaşam alanları ve iş yeri güvenlikleri hakkında firmaların disipline sakan kurallar koymak, onları geçer puan vererek sistemlerine üye etmek.

Nanoteknoloji alanında Gold Kimya'nın yenilikçi anlayışından bahsedebilir misiniz? Ne gibi çalışmalar yürütüyorsunuz?

Ayakkabı konusunda az ve özenle yana misiniz yoksa iddiâlı bir koleksiyonunuz bulunuyor mu? Az ve öz olmasına benim tercih sebebi. Böylece markamızın ürünlerini de daha sık kullanma şansı oluyor.TM
