ORUBA MEDICAL TECHNOLOGY

Company Profile: Improving clinical workflow by leveraging IoT technologies, especially in Urology area.

'Urodynamic Medical Simulation System' (first end-to-end patient simulation platform for urodynamic testing) project was started as a graduation project in 2011 in Computer Engineering Department of Baskent University. After a year working under the supervision of Computer Engineering's and Medical School's faculty members, the project was honored to be supported by the Ministry of Science, Industry and Technology. With this opportunity the young entrepreneurs Utku Ulusahin and Ahmet Uludag founded the start-up Oruba Medical Technology.

Oruba's next and main product ORUFLOW; proposes a disruptive product, powered by Oruba's patent-protected technology with HIS integration and an innovative business model that will bring the uroflowmetry out of the clinical setting, enabling a much smoother and better examination process for early detection of malfunction of the urinary tracts (particularly of malfunction patterns related to prostate cancers).

Brand: Oruba Technology, Oruflow

Products: ORUFLOW (self-operating uroflowmetry), Urodynamic Medical Simulation System

Certificates: CE- 93/42 EEC, ISO 13485

ORSA ORTHOPEDICS COMPANY

Company Profile: ORSA ORTHOPEDIC COMPANY, a subsidiary of Capa Group, has been producing medical corsets, orthopedic equipment, walking supports for paralytics, rehabilitation materials, prostheses & orthosis since 1976. Its products are sold in 4500 selling points across Turkey and in 42 countries. Moreover, most of its production is exported to other countries and it is one of the biggest companies in the world in its field. Our company's slogan is "Healthy Choice for Health". This mentality is connected to the foundation of its quality policy which is to never forget that we are serving ill people, to put ourselves in the place of our patients, to produce and apply quality control, and to inspire our employees. These are the most significant ingredients of our success. Other factors behind being a desirable brand include valuing education, hiring qualified employees, paying close attention to R&D, and regarding quality as our life philosophy. The most important advantage of our products over others are that all the raw materials we use are tested by the accredited institutions according to ISO 10993 standards, and the results are obtained by the clinics in Europe. Additionally our products have micro-climate test results obtained in Europe by accredited laboratories. Consequently, it has been proven that our products are not harmful. They are clinically sufficient, and do not cause perspiration or increase in temperature so much to damage the body when used. All these are results of our endeavors that we have been doing since 2001. Needless to say that some of the tests results found that some of our products were not compliant, so we carried on our clinical researches and made about 20 - 25 changes on some products and replaced them until we obtained the highest quality. Now, when a doctor recommends an Orsa product, he/she will not think if it is harmful to the body, cause any allergic reactions or if it will treat the problem sufficiently. Doctors know that it will comply with the standards. Our company has been holding the ISO 9001/2000 certificate and has been applying this quality management system since 2002. Our company has performed the first in the sector in Turkey once again as usual by having ISO 13485 certificate in 2010. Because we export our products to European Union countries, we have been putting the CE mark on our products since 2001. TSE Workplace Safety Certificate is also available in our company. Furthermore, we have test reports that our products are harmless as well as Microclimate Testing Reports and Clinical Research Reports. Orsa is the first company to hold these certificates and still the only company for many of these certificates in its sector. Being a leader in quality and quality certificates in its field makes us proud.
