TURKEY - GERMANY HEALTHCARE SECTOR VIRTUAL B2B MEETINGS

7-18 December 2020

REPUBLIC OF TURKEY
MINISTRY OF TRADE

Türkiye at a glance

An increasing number of people from various parts of the world are moving to Turkey to start a new life, to work, or even to find peace of mind for their retirements. The country has developed dramatically in the last fourteen years, and the pace of progress in certain fields is nothing short of astonishing.

With its unique geographical location combined with a rich and diverse history, right in the cradle of many different civilizations, Turkey is a privileged place to live for expatriates and their families.

Many of Turkey's new residents hail from countries like the UK, Germany, Ireland, Denmark, the Netherlands, Norway, Austria, Belgium, France, USA, as well as several of the Gulf countries. Thanks to the amendments in Turkey's property law that lifted the reciprocity principle, foreign homebuyers and investors are now free to purchase any property in Turkey.

From flats in urban centers to villas in suburbs, there are a multitude of options to choose from when looking for housing in Turkey. Major metropolitan areas have the most modern and complete environment for an extravagant life in the city, where luxurious residence complexes offer all the daily amenities such as private security, kindergartens, sports complexes, social facilities, parking lots, and shopping malls for their residents.

Foreigners wishing to work or reside in Turkey are obliged to file an application to the relevant Turkish authorities with required documents in order to obtain a work or residence permit. The methods and principles concerning work permits to be issued to foreigners that will be employed in Turkey vary by the relevant sector, such as education, housekeeping services, health services, tourism, aviation, entertainment, and others, as well as with respect to foreign direct investments, special foreign direct investments, professional services, and liaison offices. Meanwhile, residence permits are issued to foreigners mainly based on ownership status of real estate or on the intention to run a business or establish commercial connections in Turkey.

The transportation system in Turkey makes good use of the country's highly developed infrastructure. With more than 50 airports across the country, one can fly from one city to another in Turkey in less than an hour in most instances. An extensive network of dual carriageways and highways makes it very easy to drive from your home to any major city in Turkey. The high-speed train network, meanwhile, has been improving rapidly in the last decade; the 14 largest cities of Turkey are expected to be interconnected with high-speed train lines by 2023, the centennial of foundation of the Republic of Turkey. The education system of Turkey underwent serious reforms in the last decade. Most apparent are the now compulsory twelve-year education and the dramatic increase in the number of schools and other educational institutions. Many private and foundation schools, in addition to public schools, offer education services. Moreover, international schools, where only pupils holding a foreign passport can attend, are present throughout the country. While schools providing education in European languages such as English, German, French, and Italian are available, there are other institutions where languages such as Russian, Japanese, and Chinese are taught as well.

The healthcare system in Turkey mainly operates with three different types of hospitals: public, university, and private. While social and health securities are governed in essence by the state, it is also possible to have private health insurance. The majority of hospitals in Turkey, both public and private, are either meeting or surpassing international standards in equipment quality and expertise.

The cultural activities in which one can engage in Turkey are only limited by individual interests and capabilities. Be it arts, hobbies, entertainment, or other leisure activities, the possibilities are endless. In all major cities one can find movies, plays, concerts, ballets, operas, and other varieties of cultural activities awaiting either participants or spectators. Local festivals and more traditional forms of leisure activities are also rising in popularity.

Turkey's rich geography and suitable terrain make the country an ideal place for alternative sports such as mountaineering, golf, scuba diving, rafting, skiing, and yachting. Naturally, well-established and popular sports like football, basketball, and volleyball have a considerable number of players and supporters all over the country.

Located in the Eastern Mediterranean region and surrounded on three sides by temperate seas, Turkey has a climate allowing for extreme variations in weather, often in the same region or province. As such, it is possible to go skiing in a mountain resort after sunbathing on a sandy beach, both in the same day.

Facts and Figures of Türkiye

Young population, strong potential.

783.562 km²

The largest km², the largest landmass in Western Europe.

- **55%** of population under 35 years old
- The youngest population among EU countries
- **90%** of the population live in cities
- **5.5 million** live in capital city, Ankara
16 million live in İstanbul

- **84 million** inhabitants
- **102 inhabitants** per km²

The current population of Turkey in 2020 is 84 million a 1.09% increase from 2019.

ABOUT İKMİB

Istanbul Chemicals and Chemical Products Exporters' Association (İKMİB) takes active part in international organizations in order to sustain the professional ethics and cohesion of Turkish export companies in the chemicals industry, help increase export levels, diversify export products, help increase products' competitiveness, defend its members' rights and interests and help them form strong relationships in the international arena and support them to get into new markets since 1991. İKMİB efficiently and successfully represents the Turkish chemical sector with the support of the Ministry of Trade and Turkish Exporters Assembly in Turkey as well as in the world. In the chemical industry with its 16 sub sectors such as plastics, cosmetics, medicals and pharmaceuticals, rubber and paint, İKMİB remarkably contributes to the Turkish economy and export and also adds value to the country by supplying raw materials for many sectors such as automotive, textile, and food.

The national participation fairs and sectoral trade and buyer missions organized by İKMİB plays a vital role for chemical exporters to reach new markets. İKMİB carries out many activities in order to increase the exports of companies which operates in health sector including pharmaceuticals, medical and dental products. İKMİB organizes the national participation fairs such as Arab Health, Medica, IDS, AEEDC which are well-known in the health sector. It also carries out two different Cluster projects in pharmaceutical and health sectors. İKMİB also achieves sectoral trade missions to Far-East, South America and Africa and buying missions concurrent with important domestic fairs. By organizing pharmaceutical and medical committee meetings, it offers opportunities to assess the problems and solutions of the sector. İKMİB also organizes medical and pharmaceutical workshops by bringing the sector partners together.

Company Profile: Çizgi Teknoloji Elektronik Tasarım ve Üretim A.Ş was established in 1994. In 2004, we registered Artech - Art of Technology Brand and in 2018, we became an R&D center.

As Çizgi Teknoloji, our aim is to help you provide excellent care to your patients with Artech Medical Computer solutions with EEC93-42 Medical Device Compliance Certificate, in accordance with EEC-60601 standards. Artech Medical Computer products have high imaging quality, appropriate graphics processor, CPU performance, screen display and software compatibility. While Artech Medical Computers perfectly visualizes the details for surgeons during the surgery, it significantly increases the success of the operation by enabling surgeons and other OR personnel to concentrate more on the patient. With the appropriate software and high resolution screens, it enables the experts to see and examine the medical images better. Artech Medical Computers provide a platform to view PACS files containing medical images such as ultrasound and radiology, with the DICOM Preset feature. With PACS integration, camera images of surgical procedures of patients can be recorded and archived. Artech Medical Computers provide optimum benefits for patient safety, more efficient use of OR staff, reducing costs with time-materials and billing management, increasing patient satisfaction parallel to increasing success rates in operations, creating hospital functions for training and congress purposes.
